

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1.-28. (Canceled)

29. (Currently amended) A method for generating a printable representation of multimedia information stored in a plurality of multimedia documents, the method comprising:

receiving, at one or more computer systems, information indicative of selection criteria;

generating, with one or more processors associated with the one or more computer systems, a printable representation of each multimedia document in the plurality of multimedia documents from multimedia information electronically stored in the multimedia document, the printable representation of each multimedia document incorporating printable representations of at least two types of the multimedia information of the multimedia document;

identifying, with the one or more processors associated with the one or more computer systems, a first printable representation of multimedia information ~~associated with electronically stored in~~ a first multimedia document based on ~~information associated with one or more of the printable representations of~~ the first printable representation of the at least two types of multimedia information in the first multimedia document satisfying the selection criteria;

identifying, with the one or more processors associated with the one or more computer systems, a second printable representation of multimedia information ~~associated with electronically stored in~~ a second multimedia document based on ~~information associated with one or more of the printable representations of~~ the second printable representation of the at least two types of multimedia information in the first multimedia document satisfying the selection criteria; and

generating, with the one or more processors associated with the one or more computer systems, a consolidated printable representation of the multimedia information ~~associated with electronically stored in~~ the first multimedia document and the multimedia information ~~associated with electronically stored in~~ the second multimedia document based on at least one portion extracted from the first printable representation of the first multimedia document and at least one portion extracted from the second printable representation of the second multimedia document.

30. (Currently amended) The method of claim 29 wherein identifying the first printable representation of the multimedia information ~~associated with electronically stored in~~ the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria~~ or identifying the second printable representation of the multimedia information ~~associated with electronically stored in~~ the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ comprises analyzing multimedia information stored in a multimedia document ~~corresponding to the first printable representation or the second printable representation~~ for information that satisfies the selection criteria.

31. (Currently amended) The method of claim 29 wherein identifying the first printable representation of the multimedia information ~~associated with electronically stored in~~ the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria~~ or identifying the second printable representation of the multimedia information ~~associated with electronically stored in~~ the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ comprises analyzing data stored in a printable representation of a multimedia document ~~the first printable representation or the second printable representation~~ for information that satisfies the selection criteria, the printable representation incorporating printable representations of at least two types of multimedia information of the multimedia document.

32. (Previously presented) The method of claim 29 further comprising
printing the consolidated printable representation using an output device to generate a paper-
based document comprising one or more printed pages.

33. (Currently amended) The method of claim 29 wherein generating, with
the one or more processors associated with the one or more computer systems, the consolidated
printable representation of the multimedia information ~~associated with~~ electronically stored in
the first multimedia document and the multimedia information ~~associated with~~ electronically
stored in the second multimedia document comprises:

extracting at least one printable page from a plurality of pages of the first
printable representation that comprises information that satisfies the selection criterion;

extracting at least one printable page from a plurality of pages of the second
printable representation that comprises information that satisfies the selection criterion; and

consolidating the at least one printable page extracted from the first printable
representation and the at least one printable page extracted from the second printable
representation into the consolidated printable representation.

34. (Currently amended) The method of claim 29 wherein generating, with
the one or more processors associated with the one or more computer systems, the consolidated
printable representation of the multimedia information ~~associated with~~ electronically stored in
the first multimedia document and the multimedia information ~~associated with~~ electronically
stored in the second multimedia document comprises annotating either the at least one portion of
the first printable representation or the at least one portion of the second printable representation
in the consolidated printable representation.

35. (Canceled)

36. (Previously presented) The method of claim 29 further comprising
determining the selection criteria based on a profile associated with an individual.

37. (Currently amended) The method of claim 29 further comprising
generating a cover sheet associated with the consolidated printable representation of the
multimedia information ~~associated with~~ electronically stored in the first multimedia document
and the multimedia information ~~associated with~~ electronically stored in the second multimedia
document.

38. (Currently amended) A non-transitory computer-readable medium storing
computer-executable code for generating a printable representation of multimedia information
stored in a plurality of multimedia documents, the non-transitory computer-readable medium
comprising:

code for receiving information indicative of selection criteria;

code for generating a printable representation of each multimedia document in the
plurality of multimedia documents from multimedia information electronically stored in the
multimedia document, the printable representation of each multimedia document incorporating
printable representations of at least two types of the multimedia information of the multimedia
document;

code for identifying a first printable representation of multimedia information
~~associated with~~ electronically stored in a first multimedia document based on ~~information~~
~~associated with~~ one or more of the printable representations of the first printable representation
of the at least two types of multimedia information in the first multimedia document satisfying
the selection criteria;

code for identifying a second printable representation of multimedia information
~~associated with~~ electronically stored in a second multimedia document based on ~~information~~
~~associated with~~ one or more of the printable representations of the second printable
representation of the at least two types of multimedia information in the first multimedia
document satisfying the selection criteria; and

code for generating a consolidated printable representation of the multimedia
information ~~associated with~~ electronically stored in the first multimedia document and the
multimedia information ~~associated with~~ electronically stored in the second multimedia document

based on at least one portion extracted from the first printable representation of the first multimedia document and at least one portion extracted from the second printable representation of the second multimedia document.

39. (Currently amended) The non-transitory computer-readable medium of claim 38 wherein the code for identifying the first printable representation of the multimedia information ~~associated with~~ electronically stored in the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria or~~ the code for identifying the second printable representation of the multimedia information ~~associated with~~ electronically stored in the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ comprises code for analyzing multimedia information stored in a multimedia document ~~corresponding to the first printable representation or the second printable representation for~~ information that satisfies the selection criteria.

40. (Currently amended) The non-transitory computer-readable medium of claim 38 wherein the code for identifying the first printable representation of the multimedia information ~~associated with~~ electronically stored in the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria or~~ the code for identifying the second printable representation of the multimedia information ~~associated with~~ electronically stored in the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ comprises code for analyzing data stored in a printable representation of a multimedia document ~~the first printable representation or the second printable representation for~~ information that satisfies the selection criteria, the printable representation incorporating printable representations of at least two types of multimedia information of the multimedia document.

1 41. (Previously presented) The non-transitory computer-readable medium of
2 claim 38 further comprising code for printing the consolidated printable representation using an
3 output device to generate a paper-based document comprising one or more printed pages.

1 42. (Currently amended) The non-transitory computer-readable medium of
2 claim 38 wherein the code for generating the consolidated printable representation of the
3 multimedia information ~~associated with~~ electronically stored in the first multimedia document
4 and the multimedia information ~~associated with~~ electronically stored in the second multimedia
5 document comprises:

6 code for extracting at least one printable page from a plurality of pages of the first
7 printable representation that comprises information that satisfies the selection criterion;

8 code for extracting at least one printable page from a plurality of pages of the
9 second printable representation that comprises information that satisfies the selection criterion;
10 and

11 code for consolidating the at least one printable page extracted from the first
12 printable representation and the at least one printable page extracted from the second printable
13 representation into the consolidated printable representation.

1 43. (Currently amended) The non-transitory computer-readable medium of
2 claim 38 wherein the code for generating the consolidated printable representation of the
3 multimedia information ~~associated with~~ electronically stored in the first multimedia document
4 and the multimedia information ~~associated with~~ electronically stored in the second multimedia
5 document comprises code for annotating either the at least one portion of the first printable
6 representation or the at least one portion of the second printable representation in the
7 consolidated printable representation.

44. (Canceled)

1 45. (Previously presented) The non-transitory computer-readable medium of
2 claim 38 further comprising code for determining the selection criteria based on a profile
3 associated with an individual.

1 46. (Currently amended) The non-transitory computer-readable medium of
2 claim 38 further comprising code for generating a cover sheet associated with the consolidated
3 printable representation of the multimedia information ~~associated with~~ electronically stored in
4 the first multimedia document and the multimedia information ~~associated with~~ electronically
5 stored in the second multimedia document.

1 47. (Currently amended) A system for generating a printable representation of
2 multimedia information stored in a plurality of multimedia documents, the system comprising:

3 a processor; and

4 a memory in communication with the processor and configured to store a set of
5 instructions which when executed by the processor configured the processor to:

6 receive information indicative of selection criteria;

7 generate a printable representation of each multimedia document in the
8 plurality of multimedia documents from multimedia information electronically stored in
9 the multimedia document, the printable representation of each multimedia document
10 incorporating printable representations of at least two types of the multimedia
11 information of the multimedia document;

12 identify a first printable representation of multimedia information
13 ~~associated with~~ electronically stored in a first multimedia document based on ~~information~~
14 ~~associated with~~ one or more of the printable representations of the first printable
15 ~~representation of the at least two types of multimedia information in the first multimedia~~
16 ~~document~~ satisfying the selection criteria;

17 identify a second printable representation of multimedia information
18 ~~associated with~~ electronically stored in a second multimedia document based on
19 ~~information associated with~~ one or more of the printable representations of the second

printable representation of the at least two types of multimedia information in the first multimedia document satisfying the selection criteria; and

generate a consolidated printable representation of the multimedia information ~~associated with~~ electronically stored in the first multimedia document and the multimedia information ~~associated with~~ electronically stored in the second multimedia document based on at least one portion extracted from the first printable representation and at least one portion extracted from the second printable representation.

48. (Currently amended) The system of claim 47 wherein to identify the first printable representation of the multimedia information ~~associated with~~ electronically stored in the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria~~ or to identify the second printable representation of the multimedia information ~~associated with~~ electronically stored in the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ the processor is configured to analyze multimedia information stored in a multimedia document ~~corresponding to the first printable representation or the second printable representation~~ for information that satisfies the selection criteria.

49. (Currently amended) The system of claim 47 wherein to identify the first printable representation of the multimedia information ~~associated with~~ electronically stored in the first multimedia document ~~based on the information associated with the first printable representation satisfying the selection criteria~~ or to identify the second printable representation of the multimedia information ~~associated with~~ electronically stored in the second multimedia document ~~based on the information associated with the second printable representation satisfying the selection criteria~~ the processor is configured to analyze data stored in a printable representation of a multimedia document ~~the first printable representation or the second printable representation~~ for information that satisfies the selection criteria, the printable representation incorporating printable representations of at least two types of multimedia information of the multimedia document.

1 50. (Previously presented) The system of claim 47 wherein the processor is
2 further configured to print the consolidated printable representation using an output device to
3 generate a paper-based document comprising one or more printed pages.

1 51. (Currently amended) The system of claim 47 wherein to generate the
2 consolidated printable representation of the multimedia information ~~associated with~~
3 electronically stored in the first multimedia document and the multimedia information ~~associated~~
4 ~~with~~ electronically stored in the second multimedia document the processor is further configured
5 to:

6 extract at least one printable page from a plurality of pages of the first printable
7 representation that comprises information that satisfies the selection criterion;

8 extract at least one printable page from a plurality of pages of the second printable
9 representation that comprises information that satisfies the selection criterion; and

10 consolidate the at least one printable page extracted from the first printable
11 representation and the at least one printable page extracted from the second printable
12 representation into the consolidated printable representation.

1 52. (Currently amended) The system of claim 47 wherein to generate the
2 consolidated printable representation of the multimedia information ~~associated with~~
3 electronically stored in the first multimedia document and the multimedia information ~~associated~~
4 ~~with~~ electronically stored in the second multimedia document the processor is further configured
5 to annotate either the at least one portion of the first printable representation or the at least one
6 portion of the second printable representation in the consolidated printable representation.

53. (Canceled)

1 54. (Previously presented) The system of claim 47 wherein the processor is
2 further configured to determine the selection criteria based on a profile associated with an
3 individual.

1 55. (Previously presented) The system of claim 47 wherein the processor is
2 further configured to generate a cover sheet associated with the consolidated printable
3 representation of the multimedia information associated with the first multimedia document and
4 the multimedia information associated with the second multimedia document.
